```

**REQUEST ARGUMENTS**

*conn*            The XCB connection to X11.

**REPLY FIELDS**

*response\_type*    The type of this reply, in this case *XCB\_GET\_MODIFIER\_MAPPING*. This field is also present in the *xcb\_generic\_reply\_t* and can be used to tell replies apart from each other.

*sequence*        The sequence number of the last request processed by the X11 server.

*length*         The length of the reply, in words (a word is 4 bytes).

*keycodes\_per\_modifier*  
                  TODO: NOT YET DOCUMENTED.

## DESCRIPTION

### RETURN VALUE

Returns an *xcb\_get\_modifier\_mapping\_cookie\_t*. Errors have to be handled when calling the reply function *xcb\_get\_modifier\_mapping\_reply*.

If you want to handle errors in the event loop instead, use *xcb\_get\_modifier\_mapping\_unchecked*. See **xcb-requests(3)** for details.

### ERRORS

This request does never generate any errors.
