**REQUEST ARGUMENTS**

*conn*           The XCB connection to X11.

*drawable*       TODO: NOT YET DOCUMENTED.

**REPLY FIELDS**

*response\_type* The type of this reply, in this case *XCB\_GLX\_GET\_DRAWABLE\_ATTRIBUTES*. This field is also present in the *xcb\_generic\_reply\_t* and can be used to tell replies apart from each other.

*sequence* The sequence number of the last request processed by the X11 server.

*length* The length of the reply, in words (a word is 4 bytes).

*num\_attribs* TODO: NOT YET DOCUMENTED.

**DESCRIPTION****RETURN VALUE**

Returns an *xcb\_glx\_get\_drawable\_attributes\_cookie\_t*. Errors have to be handled when calling the reply function *xcb\_glx\_get\_drawable\_attributes\_reply*.

If you want to handle errors in the event loop instead, use *xcb\_glx\_get\_drawable\_attributes\_unchecked*. See **xcb-requests(3)** for details.

**ERRORS**

This request does never generate any errors.
