**REQUEST ARGUMENTS**

*conn*           The XCB connection to X11.

*context\_tag*    TODO: NOT YET DOCUMENTED.

*target*         TODO: NOT YET DOCUMENTED.

*query*            TODO: NOT YET DOCUMENTED.

## REPLY FIELDS

*response\_type*   The type of this reply, in this case *XCB\_GLX\_GET\_MAPIV*. This field is also present in the *xcb\_generic\_reply\_t* and can be used to tell replies apart from each other.

*sequence*        The sequence number of the last request processed by the X11 server.

*length*          The length of the reply, in words (a word is 4 bytes).

*n*                TODO: NOT YET DOCUMENTED.

*datum*          TODO: NOT YET DOCUMENTED.

## DESCRIPTION

### RETURN VALUE

Returns an *xcb\_glx\_get\_mapiv\_cookie\_t*. Errors have to be handled when calling the reply function *xcb\_glx\_get\_mapiv\_reply*.

If you want to handle errors in the event loop instead, use *xcb\_glx\_get\_mapiv\_unchecked*. See **xcb-requests(3)** for details.

## ERRORS

This request does never generate any errors.
