conn The XCB connection to X11.

context_tag TODO: NOT YET DOCUMENTED.

map TODO: NOT YET DOCUMENTED.

REPLY FIELDS

response_type The type of this reply, in this case *XCB_GLX_GET_PIXEL_MAPFV*. This field is also present in the *xcb_generic_reply_t* and can be used to tell replies apart from each other.

sequence The sequence number of the last request processed by the X11 server.

length The length of the reply, in words (a word is 4 bytes).

n TODO: NOT YET DOCUMENTED.

datum TODO: NOT YET DOCUMENTED.

DESCRIPTION

RETURN VALUE

Returns an *xcb_glx_get_pixel_mapfv_cookie_t*. Errors have to be handled when calling the reply function *xcb_glx_get_pixel_mapfv_reply*.

If you want to handle errors in the event loop instead, use *xcb_glx_get_pixel_mapfv_unchecked*. See **xcb-requests(3)** for details.

ERRORS

This request does never generate any errors.
