REPLY FIELDS

response_type   The type of this reply, in this case
                  XCB_SELINUX_GET_DEVICE_CREATE_CONTEXT. This field is also present in
                  the *xcb_generic_reply_t* and can be used to tell replies apart from each other.

sequence   The sequence number of the last request processed by the X11 server.

length   The length of the reply, in words (a word is 4 bytes).

context_len   TODO: NOT YET DOCUMENTED.

DESCRIPTION
RETURN VALUE

Returns an *xcb_selinux_get_device_create_context_cookie_t*. Errors have to be handled when calling
the reply function *xcb_selinux_get_device_create_context_reply*.

If you want to handle errors in the event loop instead, use
xcb_selinux_get_device_create_context_unchecked. See **xcb-requests(3)** for details.

ERRORS

This request does never generate any errors.
