

## NAME

`xcb_selinux_set_device_create_context` -

## SYNOPSIS

```
#include <xcb/xselinux.h>
```

### Request function

```
xcb_void_cookie_t xcb_selinux_set_device_create_context(xcb_connection_t *conn,  
uint32_t context_len, const char *context);
```

## REQUEST ARGUMENTS

*conn*           The XCB connection to X11.

*context\_len*    TODO: NOT YET DOCUMENTED.

*context*        TODO: NOT YET DOCUMENTED.

## DESCRIPTION

### RETURN VALUE

Returns an *xcb\_void\_cookie\_t*. Errors (if any) have to be handled in the event loop.

If you want to handle errors directly with *xcb\_request\_check* instead, use *xcb\_selinux\_set\_device\_create\_context\_checked*. See **xcb-requests(3)** for details.

## ERRORS

This request does never generate any errors.
