response_type   The type of this reply, in this case *XCB_XFIXES_FETCH_REGION*. This field is also
                   present in the *xcb_generic_reply_t* and can be used to tell replies apart from each

sequence   The sequence number of the last request processed by the X11 server.

length   The length of the reply, in words (a word is 4 bytes).

extents   TODO: NOT YET DOCUMENTED.

DESCRIPTION
RETURN VALUE

function *xcb_xfixes_fetch_region_reply*.

If you want to handle errors in the event loop instead, use *xcb_xfixes_fetch_region_unchecked*. See
xcb-requests(3) for details.

ERRORS

This request does never generate any errors.
