

**NAME**

**xdg-open** - opens a file or URL in the user's preferred application

**SYNOPSIS**

**xdg-open** *file* | *URL*

**xdg-open --help** | **--manual** | **--version**

**DESCRIPTION**

xdg-open opens a file or URL in the user's preferred application. If a URL is provided the URL will be opened in the user's preferred web browser. If a file is provided the file will be opened in the preferred application for files of that type. xdg-open supports file, ftp, http and https URLs.

xdg-open is for use inside a desktop session only. It is not recommended to use xdg-open as root.

**OPTIONS**

**--help** Show command synopsis.

**--manual**

Show this manual page.

**--version**

Show the xdg-utils version information.

**EXIT CODES**

An exit code of 0 indicates success while a non-zero exit code indicates failure. The following failure codes can be returned:

- 1** Error in command line syntax.
- 2** One of the files passed on the command line did not exist.
- 3** A required tool could not be found.
- 4** The action failed.
