

**NAME**

xkbbell - XKB extension user utility

**SYNOPSIS**

**xkbbell** [-display <dpi>] [-synch] [-dev <id>] [-force] [-nobeep] [-bf <id>] [-kf <id>] [-v <volume>]  
[-w <id>] [-help|-version]

**DESCRIPTION**

user utility

**OPTIONS**

- display <dpi>**  
specifies which display to use
- synch** turns on synchronization
- dev <id>**  
specifies which device to use
- force** force audible bell
- nobeep** suppress server bell, event only
- bf <id>** specifies which bell feedback to use
- kf <id>** specifies which keyboard feedback to use
- v <volume>**  
specifies which volume to use
- w <id>** specifies which window to use
- help** print list of options and exit
- version** print program version and exit

If neither device nor feedback are specified, xkbbell uses the default values for the core keyboard device.
