NAME

xkbcli compile-keymap - compile an XKB keymap

SYNOPSIS

xkbcli compile-keymap [*options*]

DESCRIPTION

xkbcli compile-keymap compiles and prints a keymap based on the given options.

--help   Print help and exit

--verbose

Enable verbose debugging output

--rmlvo

Print the full RMLVO with the defaults filled in for missing elements

--from-xkb

Load the XKB file from stdin, ignore RMLVO options. This option must not be used with **--kccgst**.

--include *PATH*

Add the given path to the include path list. This option is order-dependent, include paths given first are searched first. If an include path is given, the default include path list is not used. Use **---include-defaults** to add the default include paths.

--include-defaults

Add the default set of include directories. This option is order-dependent, include paths given first are searched first.

--rules *rules*

The XKB ruleset

--model *model*

The XKB model

--layout *layout*

The XKB layout

--variant *variant*

The XKB layout variant

--options *options*
The XKB options
