

NAME

xo_no_setlocale - prevent implicit call to setlocale

LIBRARY

Text, XML, JSON, and HTML Output Emission Library (libxo, -lxo)

SYNOPSIS

```
#include <libxo/xo.h>
```

void

```
xo_no_setlocale(void);
```

DESCRIPTION

libxo automatically initializes the locale based on the setting of the environment variables `LC_CTYPE`, `LANG`, and `LC_ALL`. The first of this list of variables is used and if none of the variables are set, the locale defaults to `UTF-8`. The caller may wish to avoid this behavior, and can do so by calling the `xo_no_setlocale()` function.

SEE ALSO

`xo_emit(3)`, `xo_open_container(3)`, `xo_open_list(3)`, `xo_format(5)`, `libxo(3)`

HISTORY

The **libxo** library first appeared in FreeBSD 11.0.

AUTHORS

libxo was written by Phil Shafer <phil@freebsd.org>.
