

NAME

xo_set_style, **xo_set_style_name** - set the output style for a libxo handle

LIBRARY

Text, XML, JSON, and HTML Output Emission Library (libxo, -lxo)

SYNOPSIS

```
#include <libxo/xo.h>
```

void

```
xo_set_style(xo_handle_t *handle, unsigned style);
```

int

```
xo_set_style_name(xo_handle_t *handle, const char *style);
```

DESCRIPTION

Use the **xo_set_style()** function to set the output style for a handle. To use the default handle, pass a NULL handle. The set of output styles used by **libxo** is:

Flag	Description
XO_STYLE_TEXT	Traditional text output
XO_STYLE_XML	XML encoded data
XO_STYLE_JSON	JSON encoded data
XO_STYLE_HTML	HTML encoded data

The **xo_set_style_name()** function can be used to set the style based on a name encoded as a string. The name can be any of the styles: "text", "xml", "json", or "html".

EXAMPLE:

```
xo_set_style_name(NULL, "html");
```

SEE ALSO

xo_emit(3), libxo(3)

HISTORY

The **libxo** library first appeared in FreeBSD 11.0.

AUTHORS

libxo was written by Phil Shafer <phil@freebsd.org>.
