

NAME

ypcat - print the values of all keys in a NIS database

SYNOPSIS

ypcat [-**kt**] [-**d** *domainname*] *mapname*

ypcat -x

DESCRIPTION

The **ypcat** utility prints out the values of all keys from the NIS database specified by *mapname*, which may be a map name or a map nickname.

The options are as follows:

-d *domainname*

Specify a domain other than the default domain.

-k Display map keys. This option is useful with maps in which the values are null or the key is not part of the value.

-t Inhibit translation of map nicknames to their corresponding map names.

-x Display the map nickname table.

SEE ALSO

domainname(1), ypmatch(1), yp(8), ypbind(8), ypset(8)
