

**NAME**

**ypmatch** - print the values of one or more keys in a NIS database

**SYNOPSIS**

**ypmatch** [-kt] [-d *domainname*] *key* ... *mapname*

**ypmatch** -x

**DESCRIPTION**

The **ypmatch** utility prints out the values of one or more keys from the NIS database specified by *mapname*, which may be a map name or a map nickname.

The options are as follows:

**-d** *domainname*

Specify a domain other than the default domain.

**-k** Display map keys. This option is useful with maps in which the values are null or the key is not part of the value.

**-t** Inhibit translation of map nicknames to their corresponding map names.

**-x** Display the map nickname table.

**SEE ALSO**

domainname(1), ypcat(1), yp(8), ypbind(8), ypset(8)
