

**NAME**

**zforce** - force gzip files to have a .gz suffix

**SYNOPSIS**

**zforce** *file* ...

**DESCRIPTION**

The **zforce** utility renames gzip(1) files to have a '.gz' suffix, so that gzip(1) will not compress them twice. This can be useful if file names were truncated during a file transfer. Files that have an existing '.gz', '-gz', '\_gz', '.tgz' or '.taz' suffix, or that have not been compressed by gzip(1), are ignored.

**SEE ALSO**

gzip(1)

**CAVEATS**

**zforce** overwrites existing files without warning.
