NAME

zfs-bookmark - create bookmark of ZFS snapshot

SYNOPSIS

zfs bookmark *snapshot|bookmark newbookmark*

DESCRIPTION

Creates a new bookmark of the given snapshot or bookmark. Bookmarks mark the point in time when the snapshot was created, and can be used as the incremental source for a **zfs send**.

When creating a bookmark from an existing redaction bookmark, the resulting bookmark is *not* a redaction bookmark.

This feature must be enabled to be used. See zpool-features(7) for details on ZFS feature flags and the **bookmarks** feature.

EXAMPLES

Example 1: Creating a bookmark

The following example creates a bookmark to a snapshot. This bookmark can then be used instead of a snapshot in send streams.

    # **zfs bookmark** *rpool@snapshot rpool#bookmark*
