NAME
zipcmp - compare contents of zip archives

SYNOPSIS
zipcmp [**-ChipqstVv**] *archive1 archive2*

DESCRIPTION
zipcmp compares the zip archives or directories *archive1* and *archive2* and checks if they contain the same files, comparing their names, uncompressed sizes, and CRCs. File order and compressed size differences are ignored.

Supported options:

-C Check consistency of archives. Results in an error if archive is inconsistent or not valid according to the zip specification.

-h Display a short help message and exit.

-i Compare names ignoring case distinctions.

-p Enable paranoid checks. Compares extra fields, comments, and other meta data. (Automatically disabled if one of the archives is a directory.) These checks are skipped for files where the data differs.

-q Quiet mode. Compare **-v**.

-s Print a summary of how many files where added and removed.

-t Test zip files by comparing the contents to their checksums.

-V Display version information and exit.

-v Verbose mode. Print details about differences to stdout. (This is the default.)

EXIT STATUS
zipcmp exits 0 if the two archives contain the same files, 1 if they differ, and >1 if an error occurred.

SEE ALSO
zipmerge(1), ziptool(1), libzip(3)

HISTORY

zipcmp was added in libzip 0.6.
