NAME

zpool-offline - take physical devices offline in ZFS storage pool

SYNOPSIS

zpool offline [**-ft**] *pool device<?>*
zpool online [**-e**] *pool device<?>*

DESCRIPTION

zpool offline [**-ft**] *pool device<?>*

>Takes the specified physical device offline. While the *device* is offline, no attempt is made to read or write to the device. This command is not applicable to spares.

>**-f**   Force fault. Instead of offlining the disk, put it into a faulted state. The fault will persist across imports unless the **-t** flag was specified.

>**-t**   Temporary. Upon reboot, the specified physical device reverts to its previous state.

zpool online [**-e**] *pool device<?>*

>Brings the specified physical device online. This command is not applicable to spares.

>**-e**   Expand the device to use all available space. If the device is part of a mirror or raidz then all devices must be expanded before the new space will become available to the pool.
