

NAME

zzz - suspend an ACPI or APM system

SYNOPSIS

zzz

DESCRIPTION

The **zzz** utility checks for ACPI or APM support and then suspends the system appropriately. For APM,

```
apm -z
```

will be issued. For ACPI, the configured suspend state will be looked up, checked to see if it is supported and,

```
acpiconf -s <state>
```

will be issued.

SEE ALSO

acpi(4), apm(4), acpiconf(8), apm(8)
